FAUNISTIC RECORDS FROM THE CZECH REPUBLIC - 47

Diptera: Dolichopodidae

Dolichopus geniculatus Stannius, 1831. Bohemia or., Náchod distr., Broumov env., Šlégrův rybník pond (5463), 2.vii.1993, 1 ♂, near pond, B. Mocek lgt., J. Olejníček det., coll. Museum Hradec Králové. Rare European species, known only from Germany. From the Czech Republic recorded for the first time.

Dolichopus occultus Becker, 1917. Bohemia or., Polabská nížina, Hradec Králové distr., Vysoká nad Labem (5860), 3.vii.1990, xerotherm, 1 ♂, B. Mocek lgt., J. Olejníček det., coll. Museum Hradec Králové. Species known from Denmark. First record for the Czech Republic. Remark: Becker (1917) stated this species as nom. nov. for *Dolichopus cilifemoratus* Staeger, 1842. According to Staeger (1842), Becker (1917) and Stackelberg (1930-1934), the only character distinguishing this species from *Dolichopus festivus* Haliday, 1832 is the wing venation (rudimentary M2). Specimen, we have available has this character developed in one wing only. It seems dubious whether *D. occultus* and *D. festivus* are different species and the revision of type material would be usefull.

Dolichopus parvicaudatus Zetterstedt, 1843. Bohemia or., Polabská nížina, Pardubice distr., Holešovice near Hradec Králové, "U Mazury" (5861), 5.viii.1987, 1 ♂, B. Mocek lgt., J. Olejníček det., coll. Museum Hradec Králové. Species known from the northern part of Europe, from France to Russia. First record for the Czech Republic.
