FAUNISTIC RECORDS FROM THE CZECH REPUBLIC – 121

Lepidoptera: Noctuidae

Dysgonia algira (Linnaeus, 1767). Moravia mer., Pálava Hills (7165-66), 10.x.1964, 1 ♀, M. Valenta leg., V. Elsner det., J. Starý et T. Kuras revid., coll. Museum of South-Eastern Moravia, Zlín. The specimen was found during revision of the museum material. The species has Palaeotropical type of distribution and is considered migrant (Nowacki 1998). In Central Europe known from southern Germany, Austria, southern Poland, southern Slovakia, Hungary, and southern Ukraine (Karlsholt & Razowski 1996, Nowacki 1998). New species for the Czech Republic.

Cucullia balsamitae Boisduval, 1840. Moravia mer., Břeclav (7267), 6.vii.1954, 1 ♂, M. Valenta leg., V. Elsner det., J. Starý et T. Kuras revid., coll. Museum of South-Eastern Moravia, Zlín. The specimen was found during revision of the museum material. The species has Eurasiatic type of distribution (Ronkay & Ronkay 1994, Nowacki 1998). In Central Europe known from eastern Austria, north-eastern Poland, southern Slovakia, and Hungary (Ronkay & Ronkay 1994, Karlsholt & Razowski 1996). New species for the Czech Republic.

Lycophotia molothina (Esper, 1789). Moravia bor., Opava (6073), 24.vi.1935, 1 ♀, J. Palásek leg., J. Starý det. et coll., T. Kuras revid. The species has Atlanto-Mediterranean type of distribution (Fibiger 1993, Nowacki 1998). In Central Europe known from Germany, north-western Austria, southern Poland, and western Ukraine (Fibiger 1993, Nowacki 1998). In the Czech Republic known from Bohemia (Laštůvka et al. 1998). Records from Moravia are in Doleschall (1909), Skala (1912), and Kabátek (1937). Laštůvka et al. (1993) considered these doubtful. First reliable record for Moravia.
