FAUNISTIC RECORDS FROM THE CZECH REPUBLIC – 165

Coleoptera: Cantharidae

Rhagonycha interposita Dahlgren, 1978. Bohemia or., surroundings of the Nový and Hvězda fishponds near the Opatov village (6164d), cca 5 km SSE of Česká Třebová, 7.vi.1994, 1 ♂, sweeping on vegetation, P. Špryňar leg. et coll., V. Švihla det. This species occurs in southeastern and central Europe; from the Czech Republic it has been known only from Moravia (Švihla 1996). New species for Bohemia.

Malthinus seriepunctatus Kiesenwetter, 1852. Bohemia centr., Český kras karst, Srbsko env., Koda National Nature Reserve, Kodská stěna (6050d), 2.vi.2002, 1 ♂, 5 ♀♀, beating of trees and bushes in a forest-steppe habitat on a sunny day, P. Špryňar leg., det. and coll., V. Švihla revid. Occurrence of this species in the former Czechoslovakia was supposed (but not recorded) by Fleischer (1932). Horion (1953: 55) mentioned its occurrence from "Böhmen-Mähren" (= Czech Republic) probably on the basis of non-confirmed record or the misinterpreted Fleischer's reference. Horion's record was not accepted by Švihla (1993). In central Europe, this species was also recorded from France, Austria, Switzerland, Germany, Belgium, the Netherlands, Poland and Slovakia (Horion 1953, Wittmer 1974, Burakowski et al. 1985, Švihla 1993, Köhler & Klausnitzer 1998). Older records of its distribution in the Mediterranean area and Asia (e. g. Horion 1953) need confirmation. First reliable record from the Czech Republic.
