FAUNISTIC RECORDS FROM CZECH REPUBLIC – 222

Coleoptera: Elateridae

Anostirus sulphuripennis (Germar, 1834). Bohemia occ.: Starý Herštejn (6542), 850 m a.s.l., 25.vi.2004, 1 ♀, on shrubs in the old leaf forest, Z. Doležal lgt. et coll., J. Mertlik det.; Šumava Mts., Boubín Mt. (7048), 1250-1362 m a.s.l., 17.viii.2004, 1 ♀, in flight in a closed forest habitat, O. Nakládal & J. Farkač lgt., J. Mertlik det., coll. O. Nakládal. Mostly West European species occuring in Austria, France, Germany, Italy and Switzerland (Horion 1953). In the Czech Republic recorded for the first time by Hennevogl (1905) only from Bohemia from Buchwald (= Bučina in Šumava Mts.) (7047) under the name *Ludius sulphuripennis* Germar, 1834. This old finding probably led later to the recording of this species in Bohemia by Reitter (1911), Fleischer (1927-1930), Jagemann (1940) and Horion (1953), but neither Jagemann (1955) nor Laibner (2000) mentions the species for this territory. The occurrence in the Czech Republic was confirmed after a century.

ACKNOWLEDGMENTS. We thank the head of the section of Šumava PLA, Administration of the Šumava National Park and Protected Landscape Area, Mgr. Pavel Hubený, for facilitation of work in the field and for benefit research activity in the Boubínský prales National Nature Reserve. We are obliged to Dipl. Ing. Stanislav Benedikt for the provision of some valuable data and to Josef Mertlik for identification of both the specimens.
