Faunistics, Lepidoptera, Tortricidae, *Commophila aeneana*, Central Europe, Slovakia

Abstract. The tortricid moth *Commophila aeneana* (Hübner, 1800) is recorded for the first time from Slovakia. It was found in the Ostrov Kopáč Nature Reserve in South-West Slovakia.

About 600 species of the Tortricidae are known from Central Europe (Razowski 2001), and approximately 500 of them occur in Slovakia (Jaroš 1998).

Commophila aeneana (Hübner, 1800) is widely distributed throughout Europe and has been reported from England, France, northern Spain, Belgium, Netherlands, Luxemburg, northern Italy, Switzerland, Germany, Austria, Romania and western Ukraine (Razowski 1970, 1996; Kuznetzov 1978). The larva of *C. aeneana* lives in lower stems and roots of *Senecio jacobaea*, *S. paludosus* and *Picris hieracioides* (Razowski 1970).

One specimen was found in South-West Slovakia in a habitat with the plant association Asparago-Crataegetum in 1989: Ostrov Kopáč Nature Reserve (grid codes of faunistic mapping 78-7968), 12.v.1989, 1 spec., flushed from vegetation near a *Senecio jacobaea* plant during the day, M. Kulfan lgt., det. et coll. This species has not been found in Slovakia so far (Razowski 2001), although its occurrence has been expected (Patočka et al. 1989).

ACKNOWLEDGEMENTS. This work was supported by the Slovak Grant Agency for Science – Grant No. 1/2342/05.

SÚHRN

V rámci faunistického výskumu motýľov (Lepidoptera) na území prírodnej rezervácie Ostrov Kopáč (juhozápadné Slovensko) v oblasti rastlinného spoločenstva Asparago-Crataegetum bol nájdený obaľovač *Commophila aeneana* (Hübner, 1800). Je relatívne dosť rozšírený v Európe a uvádza sa z Anglicka, Francúzska, severného Španielska, Belgicka, Holandska, Luxemburska, severného Talianska, Švajčiarska, Nemecka, Rakúska, Rumunska a západnej Ukrajiny. Je novým druhom pre faunu Slovenska.
