
FAUNISTIC RECORDS FROM THE CZECH REPUBLIC – 366

Coleoptera: Trogossitidae

Temnoscheila caerulea (Olivier, 1790). Moravia mer., Soběšice (6765), 49°14.57'N, 16°37.49'E, 360 m a.s.l., 5.vii.2014, 1 spec., in pheromone trap for monitoring *Monochamus galloprovincialis* (Olivier, 1795) (Cerambycidae), V. Čermák lgt., J. Foit det. et coll. The species is distributed in Asia (China, east India), North Africa (Algeria, Canary Islands and Tunisia) and Europe (Austria, Bosnia and Herzegovina, Bulgaria, Croatia, France, Germany, Greece, Poland, Portugal, Slovakia, Spain, Russia: South European Territory, Sweden and Switzerland) (Kolibáč et al. 2005, Kolibáč 2007, 2013). Within Europe the species is abundant only in the south, with few records from Central Europe. The aforementioned occurrence of the species in Slovakia is based on only a single record more than 70 years old (Roubal 1936). Both larvae and adults are carnivorous, found under the bark of coniferous trees (e.g., pines (*Pinus* spp.)) (Kolibáč et al. 2005). New species for the Czech Republic.

ACKNOWLEDGMENTS. The study was supported by the Ministry of Education, Youth and Sports of the Czech Republic, Project No. CZ.1.07/2.3.00/30.0017 Postdocs in Biological Sciences at MENDEL.U.
