FAUNISTIC RECORDS FROM THE CZECH REPUBLIC – 374

Hymenoptera: Crabronidae

Mimumesa beaumonti (Van Lith, 1949). Bohemia mer., N env. of Pístina (6955), 1.5 km of Stráž nad Nežárkou, 49°03′21″N 14°53′51″E, 400 m, 18.vii.2003, 2 ♂♂, 1 ♀. Moravia mer., Břeclav-Pohansko (7267), 48°43′15″N 16°54′12″E, 150 m, 11.viii.2011, 1 ♀. All specimens were collected on reed cover on rather wet biotopes, all M. Říha leg., det. et coll. This rarely recorded Euro-Siberian species is known from northern and central Europe (Dollfuss 1991, Bitsch et al. 2001) and central and eastern Asia (Kazenas 2002). In central Europe it is known only from Austria (Gusenleitner 1992), Czech Republic, Slovakia (Dollfuss 2004, Vepřek & Straka 2007) and Hungary (Jozan 2010). Dollfuss (2004) published a few records from Czech Republic ([Bohemia mer.] Majdalena, 1.vi.1991, 1 ♂, 4 ♀♀, leg. Deneš; Moravia mer., Cejc [Čejč], vii.1965, 1 ♀, leg. Kocourek; [without specific locality], 1 ♀, coll. Kocourek). Vepřek & Straka (2007) probably overlooked these records, and listed this species in their checklist of Spheciformes of the Czech Republic as new for Bohemia based on other specimens. Correction of the checklist, and confirmed recent occurrence in Moravia after 46 years.
