FAUNISTIC RECORDS FROM THE CZECH REPUBLIC – 408

Lepidoptera: Erebidae

Dysgonia algira (Linnaeus, 1767). Bohemia centr., Praha-Zlíchov, Prokopské údolí Nature Reserve (5952), 9.ix.2016, 1 ♂, on rocky steppes, M. Bouma & J. Švarc leg. et det., coll. J. Švarc. Mediterranean-Asiatic species. Widespread and common in southern and south-eastern Europe including the Balearics and other Mediterranean islands, extending to south Russia, and appearing as an occasional migrant in central and northern Europe, including Britain (Goater et al. 2003). In Central Europe known from southern Germany, Austria, southern Poland, southern Slovakia and Hungary (Karlsholt & Razowski 1996, Nowacki 1998). The increased frequency of recent findings in Poland as well as the present records suggest that it may be spreading in recent years (cf. Bury 2011). In the Czech Republic, it was recorded for the first time in 1964 from the Pálava Hills (Starý & Kuras 2000) and it was recently found in the Podyjí National Park (Šumpich 2011). The first record from Bohemia.
