FAUNISTIC RECORDS FROM THE CZECH REPUBLIC – 503

Coleoptera: Chrysomelidae: Bruchinae

Megabruchidius dorsalis (Fåhraeus, 1839). Moravia mer., Hodonín, Railway station (7168), 48°51′21.3″N 17°07′20.9″E, ca. 150 m a.s.l., 5.xi.2019, more than 50 spec. reared from seeds of *Gleditsia triacanthos*, O. Prýmek lgt., V. Hula det. et coll.

East Oriental species (Anton 2010) spreading in Europe, and also in other continents e.g. Argentina (Di Iorio 2015). It has expanded across much of Europe (see Nakládal 2018), since the first record in Italy (Migliaccio & Zampetti 1989), and has since been recorded from the following countries: Hungary (Ramos 2009, Bodor 2012), Switzerland (Yus Ramos 2009), France (Fritzsche & Delobel 2012, Callot 2013), Slovakia (Říha & Bezděk 2015), Russia (Crimea, Northwestern Caucasus, Krasnodar Territory) (Korotyaev 2015, 2016), Ukraine (Martynov & Nikulina 2014, Fursov & Nazarenko 2015), Germany (Rheinheimer 2014, Korotyaev 2016), Austria (Rabitsch 2016), Poland (Ruta et al. 2017), Romania (Pintilioaie et al. 2018), Georgia (Martynov et al. 2018) and Slovenia (Sajna 2019). This species was published as new for the Czech Republic by Nakládal (2018) from Bohemia. Another record was published later by Háva (2019), but despite the speed of its spread, it was not previously recorded from Moravia. New species for Moravia.

ACKNOWLEDGEMENTS. We are grateful to Jan Bezděk (Brno, Czech Republic) for help with literature.

ANTON K. W. 2010: Chrysomelidae: Bruchinae. Pp. 339–353. In: LÖBL I. & SMETANA A. (eds): *Catalogue of Palaearctic Coleoptera. Volume 6. Chrysomeloidea*. Apollo Books, Stenstrup, 924 pp.
