FAUNISTIC RECORDS FROM THE CZECH REPUBLIC – 506

Zygentoma: Lepismatidae

Ctenolepisma lineatum (Fabricius, 1775). Bohemia mer., České Budějovice, Nové Dvory (6952), 49°0′10.8″N 14°24′12.1″E, 385 m a.s.l., collected on a wall inside a room, on the second floor (garret), 17.ix.2020, 1 spec., P. Kočárek leg., det. et coll., M. Gaju-Ricart revised based on photographs (Fig. 1).

Ctenolepisma lineatum is a facultative synanthropic species native to the North Mediterranean basin and the warmer regions of Central Europe (Molero-Baltanas et al. 2012). Through trade and transportation, it has been introduced to other parts of the world, with records from North America (Wygodzinsky 1972), Australia (Smith 2017), and several European countries (e.g. Molero-Baltanas et al. 2012, Zimmermann 2016, Hage et al. 2020). In the Czech Republic, *C. lineatum* was confirmed in the South Moravian Region (Štys & Rozkošný 1996, Král & Davidová-Vilímová 2001) from 6 localities in the Pálava Biosphere Reserve, Podyjí National Park, and its surroundings (Štys & Rozkošný 1996, Král & Davidová-Vilímová 2001). The South Moravian localities are natural, non-synanthropic habitats (Král & Davidová-Vilímová 2001). The specimen from České Budějovice represents the first record from Bohemia and at the same time the first report of its synanthropic occurrence in the Czech Republic. New species for Bohemia.

ACKNOWLEDGEMENTS. I thank Miquel Gaju-Ricart (Universidad de Córdoba, Spain) for kind revision of the silverfish identification.
