70th birthday of Dr Zdeněk Bouček, M.Sc., Dr.Sc.

K 70. narozeninám RNDr. Zdeňka Boučka, DrSc.

Dr Z. Bouček, born in Hradec Králové (Czech Republic), celebrated his 70th birthday on January 8th this year. He read for the degree of Doctor of Natural Sciences at the Natural History Faculty of Charles University in Prague. Later he was awarded the degree of doctor of biological sciences (DrSc.) by the Czechoslovak Academy of Sciences on the basis of his dissertation.

In his professional career he never strayed from the goals he had set himself. His perseverance, industry and tenacity of purpose - that of a country-bred man - have been remarkable right from the start of his activities in entomology. These personal qualities helped him to overcome many severe impediments in his life and to achieve his life aim of the advancement of taxonomy and the biology of a large and poorly known yet economically very important group of hymenopterous insects, the Chalcidoidea.

After temporary employment at the Parasitological Department of the Charles University and several years in the Plant Protection Department of the Research Institute for Crop Production in Prague-Ruzyně, Dr Bouček rose in his entomological profession to become the hymenopterist of the National Museum in Prague. However, his wider taxonomic ambitions and the obstacles in the way of studying the necessary type of material of the entomological classics in world collections, plus obstructions preventing contacts with specialists abroad, led him to the painful decision to leave his homeland. In 1969 he emigrated to England. There he eventually received a grant to work at the Hope Department of Entomology, Oxford University, and was later employed by the Commonwealth Institute at the British Museum of Natural History in London. He retired in 1988 but his taxonomic work goes on and his major works published after retirement are witness to his high professional qualities.

Dr Bouček's publications on Chalcidoidea began with his first dissertation, a revision of the European species of the Chalcididae family, and continues with works on the European species of the Perilampidae, Tetracampidae, Pteromalidae and Eulophidae families, on the world species of Leucospidae, on Torymidae and other families. His professional work culminated in a monograph of more than 800 pages on the genera of 14 families of the Australasian Chalcidoidea, unique in the world because of the number of new taxa and taxonomic improvements. It was acknowledged as the fundamental and indispensible work for everyone wishing to work with this group of insects. His scientific output is not declining even after retirement.

After earlier works, mainly on *Spalangia* (parasites of synanthropic flies), and a catalogue of Palaearctic Eulophidae, African Torymidae, European and Indian Pteromalidae, European

Eulophidae, Mongolian Perilampidae and especially the West-Palaearctic genera of Pteromalidae (1991), Dr Bouček is now completing keys to the genera of the North American Pteromalidae and several other families. His chalcidological contributions to the whole world, including species important in the biological control of pests, must not be overlooked, either. His extensive activity cannot be evaluated in detail because it has become the subject of more than 140 publications and is still continuing.

For the former Czechoslovakia, he edited and wrote the major part of keys to the genera and partly the species of Hymenoptera (1957). In the sixties these keys were widely used, not only in Europe but also elsewhere, especially the part on the Chalcidoidea (translated into English) in Canada, 1964.

Dr Bouček has also done much for the faunistics of the former Yugoslavia and the present Czech and Slovak Republics. The results of the latter research are included in the Check list of Czechoslovak Insects III (Hymenoptera) in which, as an emigrant, he could not be mentioned as co-author of the part on the Chalcidoidea. In addition, he has done a lot of useful work and provided friendly help in the identification of chalcidoids as parasites of economically important pests and in providing literature for various individuals and organizations at home and abroad.

Age has not slowed Dr Bouček down in his work. Even so, we wish him continued success and good health in the future so that his life's aims may be fulfilled to the maximum.

Josef Šedivý

Dne 8. ledna 1994 se v plné činnosti dožil 70 let dr. Z. Bouček, rodák z Hradce Králové. Promoval na doktora přírodních věd na přírodovědecké fakultě Univerzity Karlovy v Praze, později získal v Československé akademii věd hodnost doktora věd v oboru biologie.

Pracoval na katedře parazitologie přírodovědecké fakulty UK v Praze, později jako entomolog v odboru ochrany rostlin ve Výzkumném ústavu rostlinné výroby v Praze-Ruzyni. Odtud odešel do entomologického oddělení Národního muzea v Praze. V r. 1969 emigroval do Anglie, kde přechodně pracoval jako entomolog v Oxfordu, později v Entomologickém ústavu britského společenství při Britském národním muzeu v Londýně, odkud odešel v r. 1988 do důchodu.

V průběhu let se stal světově uznávaným znalcem blanokřídlého hmyzu (Hymenoptera) z nadčeledi Chalcidoidea a jejich čeledí Leucospidae, Chalcididae, Torymidae, Perilampidae, Pteromalidae, Tetracampidae, Eulophidae aj. Jeho odborná práce vyvrcholila objemnou monografií australských chalcidek, která je základním dílem pro všechny entomology, kteří chtějí v taxonomii této nadčeledi pracovat. Celkem uveřejnil 148 prací o chalcidkách a jiných skupinách blanokřídlých.

Do dalších let přejeme jubilantovi hodně tvůrčí činnosti i úspěchů v entomologii a zdraví k naplnění jeho životních cílů.
